

ACCP-SEEK App and In-App Purchase of Additional Sets

There are two ways to download apps for your iPhone®/iPod touch® device: (1) through iTunes® on your computer and (2) through the App Store on your device. However, there is only one way to make in-app purchases, such as sets of additional content, and that is within the actual app running on your device.

The following are additional instructions:

1. Install the ACCP-SEEK app through iTunes®, which is installed on your computer. Within iTunes®, search for ACCP-SEEK, use this [direct link](#), or click on the link on the CHEST Web site or from an e-mail notice. The ACCP-SEEK app is now free; click the “Free App” button to initiate the installation. Enter your iTunes® log in and password when prompted. You can also rate the app and write a review within iTunes®.

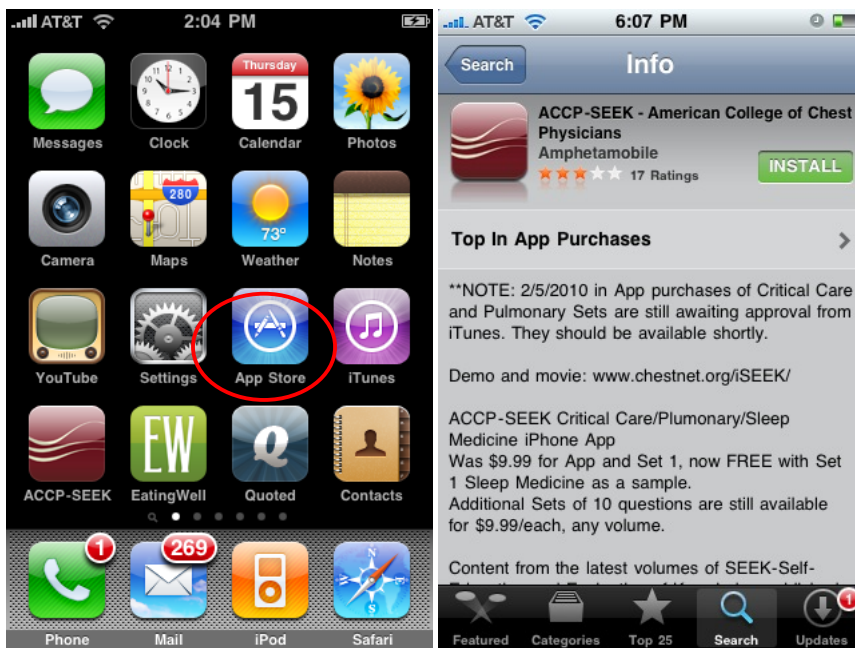

Sync your device to your computer to download the app to your device.

If the ACCP-SEEK app icon does not appear on your device (check your device home pages to be sure, as it may or may not appear on the last page), while it is connected to your computer, in iTunes®, select your device in the source list. Click the “Applications” tab, and select “Sync Applications.” Click “All” applications or “Selected” applications and choose “Apply.” The app will now download to your device, and you can start using the app.

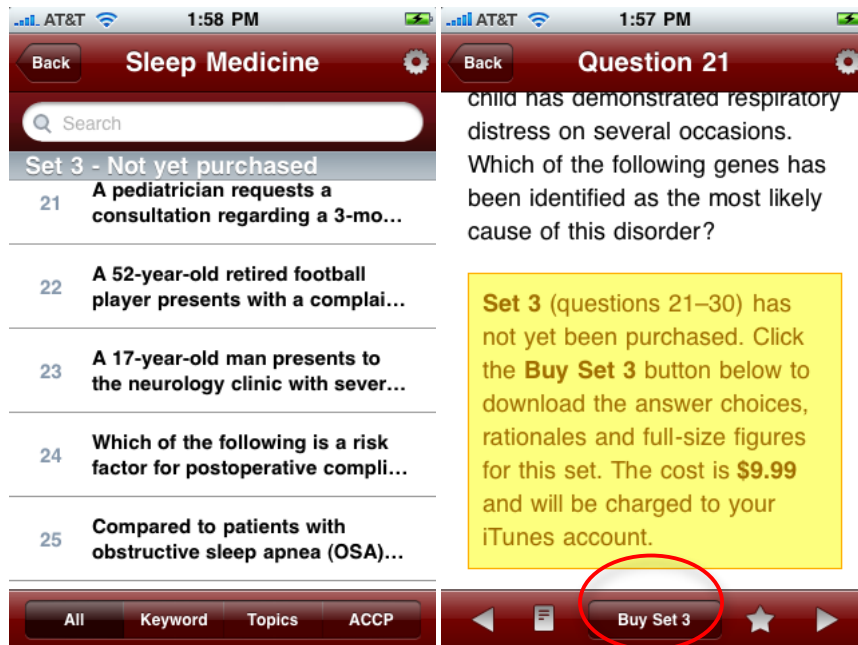

2. Install the ACCP-SEEK app through the App Store, which is automatically available on your iPhone®/iPod touch® device. You can search for, browse, review, purchase, and download applications from the App Store directly to your device without syncing with your computer. Applications you download and install from the App Store on your iPhone® are backed up to your iTunes® library the next time you sync your device with your computer. *NOTE: The ACCP-SEEK app will install only when you have a Wi-Fi connection because the app size is more than the 10 MB limit for 3G connections.*

3. Make an in-app purchase of additional content or sets. Open the ACCP-SEEK app and go to the questions, which are listed in sets. Find a question within a set that you want to purchase. For example, question 21 is in set 3, which includes questions 21 through 30. Below the question text, you will see a yellow box that indicates the set is not yet purchased and to click on the “Buy Set X” button. Clicking that button will prompt you to confirm your in-app purchase and enter your iTunes® password, and your set will automatically download directly to your device. Go ahead and purchase additional sets of questions; within a certain timeframe, you will not be prompted for your iTunes® password again.

As the new content is being downloaded from the in-app purchase server, making in-app purchases is faster with a Wi-Fi connection, but it also works with just the 3G connection.

This in-app purchase process is also shown in the demo video, which you can view from the main menu of the app or online at <http://www.chestnet.org/iSEEK>.
